Safe Access Solutions For Helicopters

SEPARATING PEOPLE FROM HAZARDS

Helicopters often are very awkward or complex shapes, which can be difficult to access. Our platforms are designed to suit tricky layouts and provide a safe solution to working at height. Bearing type castors allow you to effortlessly manoeuvre the units in/out of position, whilst telescopic handrails allow the blades to be rotated and inspected with ease. By using bespoke access equipment, designed specifically for the task in hand, work can be done safely and efficiently.

Tailored to your very specific requirements

Kee®

Safety

Off-the-shelf access platforms often do not meet specific site requirements and on those occasions custom work platforms offer the best solution. Our bespoke access platforms can be designed to your very specific site requirements and are used for safe access during helicopter maintenance and repair.

Tested and Built to The Highest Standards

Whilst each platform is designed to suit a specific application, we make sure that all our platforms meet industry regulations such as EN: 14122 part 1-4, EN 1004:2004, EN 5395 and OSHA.

Various Options Available

- Material: Aluminium or steel or fibreglass
- Design: Mobile or static; modular or fabricated
- Size: Variable height and length custom built
- **Flooring:** Nylon treads, checker plate or GRP open grid decking
- Colour: Can be powder coated in any RAL colour

Delivery and Installation

Our platforms are delivered with detailed drawings showing how the platform is assembled for the highest level of safety. Platforms can be delivered assembled or flat packed. Our professional installers can assemble the platforms in position on site for you.
